

ANGGA EKA SEPTIAN

Data Analyst

Surabaya, East Java, Indonesia | +62 821-4326-3740 | Angga.es793@gmail.com | <https://www.linkedin.com/in/angga-eka-septian-355251106/> | https://github.com/anggaes793/Portfolio_DataAnalyst

PROFESSIONAL SUMMARY

Certified Data Analyst (Refocus, 2023) who has delivered 5+ end-to-end analytics projects, from raw data collection and cleaning through statistical modeling to interactive dashboards and business recommendations. Experienced across diverse data types - financial statements of Indonesia Stock Exchange (IDX) listed companies, panel data, survey questionnaires, HR employee records, and retail transaction data of up to 9,994 rows. Proficient in multiple and moderated regression (MRA), SEM-PLS, classical assumption testing, and data visualization with Power BI, Tableau, Excel, SQL, and Python. Former junior auditor at a public accounting firm, accustomed to working with financial data that demands high accuracy. Strong English proficiency (TOEIC 830, TOEFL ITP 607).

TECHNICAL SKILLS

- **Statistical Analysis:** multiple linear regression, Moderated Regression Analysis (MRA), SEM-PLS (first & second order), classical assumption testing (Kolmogorov-Smirnov normality, multicollinearity/VIF, heteroscedasticity, Durbin-Watson autocorrelation & Cochrane-Orcutt), validity testing (convergent, discriminant, cross loading, Fornell-Larcker, HTMT), reliability testing (Cronbach's Alpha, Composite Reliability, AVE), hypothesis testing (t-test, F-test, bootstrapping), mediation and moderation analysis
- **Data Processing:** data cleaning (box plot outlier detection, missing values, variable transformation), panel data construction, questionnaire sorting and categorization, pivot tables, multi-dimensional aggregation
- **Tools:** Microsoft Excel (advanced), SQL, Python, SPSS, SmartPLS, Power BI (Power Query, DAX), Tableau, STATA, Eviews, AMOS, Lisrel, WarpPLS, HTML/JavaScript dashboards
- **Visualization & Reporting:** interactive dashboards with cross-filtering, KPI cards, waterfall charts, scatter plots, combo bar-line charts, dynamic tables, insight and business recommendation writing
- **Domain:** financial statement and corporate governance analysis, HR analytics (attrition & retention), retail margin and profitability analysis, consumer behavior and technology adoption research

WORK EXPERIENCE

Freelance Data Analyst — Statistical Analysis, Quantitative Research & Business Intelligence 2023 – Present

Delivering analytics projects for academic and business clients, covering the full cycle from framing the analytical question and processing raw data to statistical modeling and presenting results in dashboards and actionable reports. Example of the projects:

Project 1 — Effect of Ownership Structure on CSR Disclosure: 30 Consumer Goods Manufacturing Companies Listed on the IDX (2021–2023)

- **Data handled:** financial and annual reports of 30 listed companies from idx.co.id across 3 years, structured into 90 panel data observations with 4 variables (foreign ownership, institutional ownership, independent board of commissioners, and CSR disclosure index)
- **Process:** cleaned the data using Excel and Python — box plot outlier detection per variable, missing value treatment, dependent variable transformation, and conversion into a test-ready panel data structure
- **Methods:** complete classical assumption testing in SPSS (Kolmogorov-Smirnov normality sig. 0.200; multicollinearity VIF 1.13–1.84; heteroscedasticity; Durbin-Watson autocorrelation), followed by Moderated Regression Analysis (MRA)
- **Problem solving:** detected autocorrelation in the initial model (DW 0.899) and corrected it using the Cochrane-Orcutt method until the model was free of autocorrelation (DW 1.891), keeping the estimates valid and unbiased
- **Results:** demonstrated that foreign ownership ($t = 7.259$) and institutional ownership ($t = 8.074$) have a positive and significant effect on CSR disclosure, and that the independent board of commissioners moderates the institutional ownership relationship ($t = 3.487$; $p = 0.001$); the final model explained 59.7% of CSR variation and was simultaneously significant ($F = 24.840$; $p = 0.000$)

Project 2 — Determinants of Digital Wallet (E-Wallet) Adoption among 248 University Students in Malaysia

- **Data handled:** online survey data (Google Form) from 248 respondents — 9 demographic variables (gender, age, education level, monthly allowance, state, year of study, application used) and 17 Likert-scale (1–5) indicators across 4 constructs: perceived usefulness, perceived ease of use, subjective norm, and digital apps acceptance
- **Process:** sorted and categorized questionnaire responses against set parameters, cleaned the data in Excel and Python, and produced descriptive statistics, frequency/percentage tables per indicator, and respondent demographic profiles in SPSS and Excel

- **Methods:** SEM-PLS using SmartPLS 3.0 — outer model (convergent validity with outer loadings > 0.5; discriminant validity via cross loading, Fornell-Larcker, and HTMT < 0.85) and reliability testing (Cronbach's Alpha 0.789–0.881; Composite Reliability 0.864–0.913; AVE 0.615–0.757)
- **Problem solving:** identified indicator DA1 as failing discriminant validity through inter-indicator correlation analysis, removed it from the model, and re-ran a second testing stage until all constructs met the criteria
- **Results:** the inner model achieved R^2 of 68.6% and Q^2 of 0.359 (strong predictive relevance); bootstrapping confirmed all three hypotheses were accepted ($p < 0.05$), with perceived ease of use as the strongest predictor — forming the basis for recommending that e-wallet providers prioritize usability and social proof strategies

Project 3 — Modeling Export Performance of Indonesia's Processed Cocoa Agroindustry: Industrial Efficiency, Competitive Strategy, and Mediation Effects (Second-Order Model)

- **Data handled:** secondary data from the 2022 BPS Plantation Company Survey combined with a structured questionnaire; a complex model of 3 latent variables, 8 dimensions, and 45 indicators (industrial efficiency, competitive strategy, export performance)
- **Methods:** second-order SEM-PLS following the Sarstedt et al. procedure — low-order testing (dimension validity and reliability) followed by high-order testing of relationships between main variables, including formative indicator testing (loading factor and indicator weight) and a full collinearity test (all VIF $2.161 < 3.3$, model free of common method bias)
- **Problem solving:** ran four iterative stages of discriminant validity testing, progressively dropping invalid indicators until all constructs met AVE > 0.50 and composite reliability > 0.70
- **Results:** found that industrial efficiency has no direct effect on export performance ($p = 0.878$) but a significant effect through competitive strategy as a mediator (indirect coefficient 0.707; $t = 11.081$; $p = 0.000$) with R^2 of 94.8% — business insight: increasing production capacity alone does not improve export performance without an executed competitive strategy

Project 4 — HR Analytics Dashboard: Employee Attrition and Retention Analysis (Microsoft Power BI)

- **Data handled:** employee dataset covering demographic and employment attributes: age, gender, department, job role, education field, income range, years at company, and job satisfaction
- **Process:** transformed and modeled the data in Power Query and built DAX measures for key KPIs (Overall Employees, Active Employees, Attrition Count, Attrition Rate, Average Age) along with age band and income range groupings
- **Visualization:** single-page dashboard with KPI cards and attrition breakdowns by department, education field, monthly income range, years at company, age group, and a job satisfaction matrix by job role
- **Impact:** enables HR teams to quickly identify the highest turnover pockets and prioritize retention programs for the employee segments most at risk of leaving

Project 5 — Retail Margin and Profitability Dashboard (Superstore Dataset, 9,994 Transactions)

- **Data handled:** 9,994 order rows across 21 columns spanning January 2014 – December 2017: sales, profit, discount, quantity, product category and sub-category, region, state, customer segment, and ship mode
- **Process:** built derived metrics (margin % = profit ÷ sales, average order value, profit contribution, discount bands) and multi-dimensional aggregations recalculated live from the raw data on every filter change — with no hard-coded figures
- **Visualization:** interactive dashboard with 5 cross-filters (year, region, segment, category, ship mode), a waterfall chart of profit leakage by discount band, monthly sales vs margin trends, a volume vs profit-quality scatter plot, profit ranking by sub-category, and a sortable state-level table
- **Results:** revealed that losses concentrate in heavily discounted transactions rather than weak demand, that 10 states closed at a loss (led by Texas, Ohio, Pennsylvania, and Illinois), and that the Consumer segment drives half of sales at the lowest margin — supporting recommendations on discount caps and product mix refinement

P2M Staff (Prevention and Community Empowerment) — National Narcotics Board (BNN), Pasuruan Regency 2020 – 2021

- Managed administration for prevention and community empowerment programs: preparing activity documents, scheduling outreach sessions, and coordinating with schools, institutions, and target community groups.
- Recorded and consolidated participant and activity data into the agency database, ensuring completeness and consistency for reporting purposes.
- Prepared periodic activity reports used to evaluate program achievement and account for institutional performance.

Junior Auditor (Internship) — KAP Supoyo, Sutjahjo, Subyantara & Rekan (Public Accounting Firm), Surabaya May 2019

- Contributed to the 2019 General Election Campaign Fund Audit project (KPU): verifying political parties' campaign fund receipt and expenditure reports against supporting transaction evidence.
- Examined financial documents using sampling techniques, cross-checked figures across documents, and flagged discrepancies and findings for senior auditor follow-up.
- Prepared audit working papers and organized client documentation to firm standards; applied junior auditor training (2018–2019) covering accounting standards, audit procedures, and risk identification.

- Served customer inquiries, requests, and complaints by phone, message, and in person, focused on fast and accurate resolution.
- Explained company products and services, processed customer administrative requests, and ensured customer data was recorded completely and accurately in the system.
- Escalated complex cases to relevant units and tracked them to closure, and compiled recurring complaints as input for service improvement.

GTP Sales Trainee (Graduate Trainee Program) — PT Coca-Cola Amatil Indonesia 2017 – 2018

- Completed a graduate development program with cross-functional rotation covering end-to-end company operations: production, distribution and logistics, marketing, and sales.
- Supported the field sales team through outlet visits, product offering, maintaining product availability and display, and building relationships with store owners.
- Monitored daily and weekly sales target achievement and prepared route activity reports; completed First STEP leadership and supervisory training.

Administrative Staff — UPN “Veteran” East Java, Surabaya 2015 – 2016

- Handled daily unit administration: incoming and outgoing correspondence, document numbering, and both physical and digital filing.
- Entered and updated records in the system, prepared data recaps and supporting documents for meetings and unit reports, and responded to information requests from students and lecturers.

English Tutor — Surabaya City Government Work Internship Program 2014 – 2015

- Taught practical English to participants of the Surabaya City Government internship program, covering conversation and basic correspondence for workplace needs.
- Developed materials and exercises matched to participant levels, evaluated learning progress, and provided regular feedback.

EDUCATION

Bachelor of International Relations (S.IP) — Universitas Brawijaya, Malang, Indonesia 2011 – 2015

- GPA 3.38/4.00 — Faculty of Social and Political Sciences, concentration in International Security and Peace.
- Relevant coursework: Social Statistics, Social Research Methods, International Relations Methodology, Information and Communication Technology.
- Thesis: “Analysis of Japan's Policy on Deploying the Self Defense Force (SDF) to Iraq in 2004”.

TRAINING AND CERTIFICATIONS

- Data Analyst Certificate — Refocus / PT Digital Edukasi Plus (2023): data processing, data visualization, statistics; Excel, SQL, Python, Tableau, Power BI.
- Junior Auditor Training — KAP Supoyo Group (2018–2019): accounting standards, audit procedures, sampling techniques, risk identification.
- Management Trainee and First STEP Supervisory Training — PT Coca-Cola Amatil Indonesia (2017–2018).
- TOEFL ITP Prediction Test — Score 607 (Schoters, 2024). TOEIC Listening and Reading — Score 830 (ETS).
- Microsoft Office Desktop Application — Trust Training Partners, Microsoft Learning Partner (2015).
- Competency-Based Hospitality Vocational Training (240 hours) — Surabaya Vocational Training Center, East Java Manpower Office (February – April 2018), declared COMPETENT.

LANGUAGES

Indonesian: native | **English:** advanced (TOEIC 830, TOEFL ITP 607)
